## The "Hidden Claw" as Jurisdictional Reach

In international law, strength isn't always about visible military force; it's about legal reach. The "hidden claw" represents the ability of an organization or a legal framework to exert influence across borders silently and effectively.

**Extraterritoriality:** This is the legal "grip" where a nation's laws apply beyond its own borders (e.g., anti-corruption laws or sanctions).

**Universal Jurisdiction:** The principle that allows states or international organizations to claim jurisdiction over persons for crimes committed anywhere, regardless of nationality.

**JIN.**
